Acknowledgments

The National Science Foundation (NSF) helped support this work with two grants. The Ethics and Values Studies office of the NSF helped support the Directions and Implications of Advanced Computing conference in 2001 and several of the other ten DIAC symposia that helped develop the groundwork and the community for this work. The NSF supported my trip to Malmo, Sweden, where I first presented this project. The Evergreen State College where I teach (“The last great experimental college in the American Empire,” according to Cornel West) provided two grants: one to assist with the development of the book and one to explore how pattern languages could be used in education, particularly as a way to encourage the development and integration of knowledge within a collective and constructivist framework. I also thank Computer Professionals for Social Responsibility (CPSR). Although we did not always see eye-to-eye, the relationship has been enduring and fruitful. CPSR sponsored the Directions and Implications of Advanced Computing symposia, hosted the Public Sphere Project Web space (thank you, Carl and Ed!), and helped in innumerable other ways. I’ve been working with CPSR for over twenty years and I’ve been ready for a reinigorated and assertive “CPSR 2.0” for a good fifteen of them! Are you?

I thank people who have helped advance several of my admittedly iffy propositions over the years. Many have been supportive, while others were scratching their heads. Val Brown did an amazing job of editing the first draft of this manuscript and keeping engaged in the project for several years. John Adams put in an enormous number of hours on so many thankless tasks. Ken Gillgren was extremely steady and helped me through the periods when too much material was due in too brief a time. Andrew Dearden helped throughout the process, but was immeasurably productive at a critical period with the organization of the patterns. Stewart Dutfield was a reliable and enthusiastic contributor for years, as were John Thomas, Burl Humana, Justin Smith, and others. Fiorella de Cindio helped organize a meeting in Milan and in general is a tireless worker for an inclusive and intelligent civil society. And Scott Rose has volunteered his time developing several Web sites and applications for DIAC conferences and this project for over twenty years. Scott developed the online pattern management system, while several others, like Allen Williams, Abram Bender, Jeff Shieber, and even me, developed specialized applications that built on the core. I also relied on a

number of people for advice and other assistance, including Peggy Holman, Nancy White, Mike Powell, Åke Walldius, Peter Blomquist, Todd Davies, Peter Dorman, Ron Eglash, Greg Paine, Jonathan Lawson, Andrew Clement, Ed Johnson, Roxi Bruner, Allen Acevedo, Shea Kaufman, and Bradie Derrenger. Beverly Miller, Jessica Pugsley, Melissa Crouse, and Thomas Van Rosendaal also helped greatly with the manuscript.

Thanks of course to all of the authors (approximately eighty-five of them) who contributed patterns to this book. Thanks also to everybody who contributed a pattern or pattern idea to the Web site. There are over four hundred of them, and I am hoping that this community will continue the pattern language work that we have started. A much longer list of contributors is on the Web. If you do not see your name there, please tell me. My intention is to acknowledge everybody who has helped, and my bad memory should not get in the way of that.

I thank Bob Prior for being flexible with me and generous with the patterns in a way that is in keeping with the spirit of the project. Bob, unlike other editors, felt that it was important to maintain the open accessibility of the patterns on the Web, for which I am very grateful. I also thank Valerie Geary, Nathan Hohenstein, Colleen Lanick, Alyssa Larose, Beverly Miller, Sandra Minkkinen, Sharon Deacon Warne, and others, particularly for their willingness to be flexible as they worked on a somewhat unorthodox book.

I feel quite fortunate to be able to count as colleagues a remarkable group of people from around the world (thank you, Internet!) who are able to promote and pursue the development of computer systems without forsaking their ideals. They are too numerous to list here, and the group is growing daily. Without this group of people around to assure me that I was not crazy—or at least not the only one with crazy ideas—I am not quite sure what I would have done. Certainly solidarity and community provide enduring incentives throughout efforts like these.

Finally I thank my family—including my mother, Donna, and mother-in-law, Flo—and my wife of twenty-seven years. Although Terry was not happy (nor was I) with the thousands of hours that I plowed into this project, she (mostly) supported all of this. Our two kids, now mostly grown-up, looked at this effort with some amusement. I hope that they and others in their generation will step up to the challenges that my generation has at least sporadically picked up and successfully face them. There is a lot of work to be done.
