

THE COGNITIVE NEUROSCIENCES

Fourth Edition

Michael S. Gazzaniga, *Editor-in-Chief*

Section Editors: Emilio Bizzi
Alfonso Caramazza
Leo M. Chalupa
Scott T. Grafton
Todd F. Heatherton
Christof Koch
Joseph E. LeDoux
Steven J. Luck
George R. Mangun
J. Anthony Movshon
Helen Neville
Elizabeth A. Phelps
Pasko Rakic
Daniel L. Schacter
Mriganka Sur
Brian A. Wandell

INDEX

A

- Abulia, 568, 573
- Acetylcholine, 1140
- Acetylcholinesterase (AChE), laminar shifts in, 34
- Across-stimulus generalization, in auditory training, 357–358
- Across-task generalization, in auditory training, 355–357
- Actin polymerization, 146–147
- Action
- in intention understanding, 635–636
 - in learning and learning transfer, 160–161
 - object concepts in support of, 1032–1035
- Action-based choice, 1081
- Action planning
- central nervous system and, 541–543, 547
 - hierarchical nature of, 642–644
 - motor primitives in, 541–543
- Action semantics, 648–650
- Actions
- fear, neural basis of, 914–918
 - nature of, 906
 - in Pavlovian conditioning, 906–909, 914–918
- Actual code, 420, 432
- Actual decoder, 420, 432
- Actual encoder, 420
- Ad auctions, 1250–1251
- Adaptation
- aftereffects in face recognition, 468
 - defined, 436–437
 - eye movements and, 517–518
 - fMRI, 715
- Adaptive control, basal ganglia function and, 375–377
- Adolescence
- cognitive development in, 73–82
 - cognitive control, 73, 76–77
 - current and future directions for research, 81–82
 - fluid reasoning, 77–81
 - structural brain development, 73–74
 - working memory development, 73, 74–76
 - stress and, 893
- Adoption studies, language impairment, 856
- Adulthood, stress and, 893
- Affective theory, 1093–1094
- Afference, posterior parietal cortex (PPC) and, 600–601
- Aggression, violent video games and, 155
- Aging process
- aerobic exercise and cognitive processes, 157
 - Alzheimer's disease, 147, 270, 1009–1010, 1237
 - episodic memory deficits, 753
 - relational reasoning and, 1008–1011
- Agnosia, 792
- Agrammatic aphasia, 808
- Agraphia, 799
- Akaike information criterion (AIC), 378, 379
- Akakievitch, Akakhi, 310
- Alexia, 260, 794, 799
- Alexithymia, 979
- Alhazen, 511, 514
- Allelic variation, 89–90
- Altered states of consciousness, 1139
- Alzheimer's disease, 147, 270, 1009–1010, 1237
- American Association of Anatomists, 9
- American Sign Language (ASL), 169–170
- Amnesia
- in blocking reconsolidation, 694–695
 - cue-induced, 693–694
 - experimental, 696–697
 - future-event simulation and, 752–754
 - HM (patient), 656, 659, 675
 - learning rewarding nature of sensory states, 592–593
 - medial temporal lobe function
 - habit learning studies, 679–680
 - retrograde amnesia, 684–685
 - working memory studies, 678–679 - recovery from, 696–697
 - source, 1118
 - time-dependent behavioral impairment, 694–695
- AMPA (α -amino-3-hydroxy-5-methyl-4-isoxazole propionate) receptors
- in fear reaction, 912
 - synaptic plasticity and, 111–113, 118–119
- AMPA endocytosis, 101
- Amygdala
- context effects and, 935–942
 - context conditioning, 939–940
 - experimental context, 941–942
 - facial expression, 935–939
 - fMRI activation to specific stimuli, 936–937, 941–942
 - and domain-specific neural circuitry, 1036–1038
 - in emotion regulation, 966
 - nonconscious processing of emotion, 1186
 - social cognition, 1185
 - in fear response, 1095–1096
 - conditioned fear actions, 914–918
 - conditioned fear reactions, 891–896, 911–913, 930
 - infant, 891–896
 - parallel processing, 913–914
 - memory for visual details of emotional stimuli, 726–727
 - modulation of hippocampal consolidation, 729–730
 - moral judgment and, 988, 989–990
 - organization of, 909–911
 - overview, 1095–1097
 - in processing emotional information, 928–929, 931, 932
 - fMRI activation to specific stimuli, 936–937, 941, 942
 - imaging genetics studies, 947–948
 - in retrieval of emotional memories, 731–733
 - in self-regulation, 957
 - in threat detection, 958
 - valuation in decision making, 1097
- Analogical reasoning, 78, 79, 1008, 1010, 1012–1013
- Anger, facial expression and amygdala response, 935
- Animal studies. *See* Birds; Cats; Comparative approach; Ferrets; Fish; Frogs; Monkeys; Neural populations in primate cortex; Rodents
- Anisomycin, 698
- Anisotropy, 1127–1128
- Anomia, 260
- Anoxia, 1128–1130
- Anterior area (AI), empathy and, 975–982
- Anterior cingulate cortex (ACC)
- in conditioned fear reactions, 917, 918
 - conflict-control model, 252–257
 - in decision making, 1023–1027
 - in emotion regulation, 963, 964, 965–970
 - empathy and, 975–981
 - moral judgment and, 988–991, 992, 993–994
 - regulation of control, 709
 - reward/value signals in limbic system, 228
 - in threat detection, 957–958
- Anterior inferior parietal area (AIP), mirror neuron system and, 626–633, 634–635
- Anterior intraparietal sulcus (aIPS), goal representation and, 644–645, 647
- Anterior olfactory nucleus, 326
- Anterior rostral MFC, 1026–1027
- Anterior temporal lobes (ATL), in semantic cognition, 1061–1064
- Anterograde alteration, of synaptic plasticity, 114–116
- Anticipation, 962
- anticipatory signals, 219–223
 - movement intention and, 599–601
- Antideceptive theories, 1243
- Antisocial personality disorder (APD), moral judgment and, 988
- Aphasia, 148, 259–260, 1033, 1236
- double dissociation in processing, 767–768, 780, 781
 - following stroke, 259–260, 810
 - morphological deficits in, 779, 780
 - phonological processing in, 767–768
 - semantic, 1063–1064
 - syntactic deficits and, 808–813

- Apoptosis (programmed cell death),
 cross-species comparisons of cortical
 development, 16
- Apperceptive agnosia, 792
- Appetitive conditioning research, 914
- Apraxia, 599, 648–649
 conceptual, 649
 ideomotor, 649
- Aquatic cetaceans, in evolutionary biology,
 52
- Arcuate fasciculus (AF), connectivity studies,
 57–58, 261–262, 263
- Areal domain, neocortical development, 7,
 18–19
- Aristotelian philosophy, 49
- Aristotle, 1116
- Arousal
 in learning and learning transfer, 161
 states of consciousness and, 1139–1140
- Artificial grammar learning, 880
- Asperger syndrome, empathy and, 979
- ASPM (abnormal spindlelike microcephaly
 associated), 59
- Assessment. *See names of specific assessment
 instruments*
- Assimilation, in color vision, 387–388
- Association studies
 basal ganglia function and, 576
 nature of, 856
- Associativity
 in conceptual representations, 1032
 in memory formation, 113–114, 119,
 121–122
 in valuation process, 1087
- Asynchrony detection, in relative-learning
 tasks, 359
- Ataxia, 603
- Athletic domain
 aging process and, 157
 complex learning environments, 156–158
 experience-dependent learning, 155, 157
- Atonia, 1139
- Attachment, infant
 fear learning and, 891–896
 maternal separation/deprivation in, 895
 nature of, 889–890
 neonatal handling, 895–896
 neural circuitry and, 890–891
 odor learning in, 889–890
 rearing environment alteration, 895
- Attention. *See also Cognitive (executive)*
 control; Selective attention; Visual
 attention
 attention training for children, 173–175,
 176
 attentional control processes, 185–186,
 251–252
 basal ganglia function and, 573–575
 behavioral phenomena of, 189–200
 attentional bottleneck, 282–283
 consciousness as, 199–200
 control of attention, 198–199
 feature binding, 197–198, 274–276
 focused versus distributed attention,
 199
 limits on attention, 189–191
 in perceptual processing, 926–928
 selection process, 191–193
 timing, 193–197
 consciousness versus, 199–200, 1141–1143
 control of, 186, 198–199
 integrating with conflict detection,
 251–257
 Sylvian fissure, 186, 263–264
 defining, 185, 219
 effect of emotion on allocation of, 726–727
 emotion and, 925–932
 automaticity, 929–931
 behavioral effects on perception,
 926–928
 cultural factors, 931–932
 current behavior goals, 932
 neural circuits underlying attention,
 928–929
 neural processing in perception,
 925–926
 personality factors, 931–932
 event-related potentials (ERPs) in, 170,
 176, 186, 193, 196–197, 199,
 254–255
 feedback in visual, 1165–1175
 focused versus distributed, 199
 Hillyard principle, 170
 limits of, 189–191
 behavioral coherence, 191
 disappearance of, 191
 general resources, 190
 structural interference, 189–190
 method of selection, 192–193
 changes of tuning or selectivity, 193
 facilitation, 192–193
 inhibition, 193
 microcircuitry of, 186
 orientation of spatial, 795–796
 plasticity in development of, 170–173
 priming and, 196, 197, 199
 stages of, 193–197
 attentional blink, 196, 197, 199, 1153,
 1209
 early versus late, 193–197
 explicit processing and, 196, 197
 implicit processing and, 195–197
 psychological refractory period, 194, 195
 reverse hierarchy theory (Hochstein and
 Ahissar), 194
 top-down control signals, 186–187,
 211–212, 213–214, 220
 video games and, 157
- Attention-deficit/hyperactivity disorder
 (ADHD), 82, 147, 176, 865
 basal ganglia function and, 568, 574
- Attention Network Test (ANT), 192
- Attentional blink, 196, 197, 199, 1153, 1209
- Attentional bottleneck, 282–283
- Attentional control signals. *See also Cognitive*
 (executive) control
 conflict and, 252–253
 nature of, 251
- Attentional dyslexia, 797
- Attentional load theory, 206–207
- Attentional processing, in selective attention,
 293–298
 feature-selective modulation of rhythmic
 synchronization, 297–298
 gamma-band synchronization, 293–295
 inter-areal synchronization, 298–299
 preparatory attentional states, 295
 temporal expectancies of target processing,
 296–297
- Attractive bias, 531
- Attractor networks, 121–123
- Auditory cortex
 neuroplasticity in, 147, 167–169
 in perceptual learning, 132–133,
 353–363
 peripheral auditory attention, 170–171
 rewiring vision into auditory pathway,
 95–98, 131, 166–167
 visual deprivation and auditory
 development, 167–169, 321
- Auditory filter, 345
- Auditory masking, 343–351
 energetic, 344–345, 349, 351
 informational, 345–351
 described, 345–348
 simultaneous multitone maskers and,
 345–348
 speech recognition process, 348–351
 perceptual, 348–349
 simultaneous multitone maskers,
 345–348
- Auditory-motor integration networks, verbal
 working memory in, 771
- Auditory pathway, rewiring vision into,
 95–98, 131, 166–167
- Auditory processing, 132–133, 353–363
 characteristics of, 358–362
 across-task generalization, 355–357
 learning on trained condition,
 354–355
 in fear conditioning, 913
 neural processes in
 described, 353–358
 neural underpinnings of perceptual
 learning, 362–363
 object analysis, 367–380
 concept of auditory object, 367–368
 fMRI studies in, 371–379
 manipulation of natural stimuli,
 368–370
 natural stimuli, 368–370
 stimuli based on sequence of objects,
 370–371
 synthetic stimuli for, 370
- Autism, 147, 166
 empathy and, 979
 motor cognition and, 636–638
 phenomenal consciousness in, 1118
- Autism spectrum disorder (ASD), early
 language acquisition, 845–847,
 848
- Autobiographical memory, 684–686, 726,
 731, 753
- Autobiographical Memory Interview (AMI),
 686, 687, 753
- Automaticity, of emotional processing,
 929–932
- Autosomal dominant retinitis pigmentosa
 (adRP), 388–389
- Avians. *See Birds*
- Avoidance conditioning, 116, 907–909

- Awareness. *See also* Consciousness
 declarative memory and, 686–687
 detecting, following brain injury,
 1125–1127
 self-awareness, 954–955
 visual. *See* Visual awareness
- Axel, Richard, 324–325
- B**
- Back-propagation of error, 1050
- Balanced Emotional Empathy Scale (BEES),
 978–979
- Balint's syndrome
 characteristics of, 269, 270–273, 798
 following stroke, 198
 loss of feature-based attention, 271–272
 loss of object-based attention, 270–271
- Bartlett, Frederic, 751
- Basal ganglia
 in cognition, 565–579
 anatomical perspectives, 565–568
 chunking of action repertoires, 577–579
 clinical perspectives, 568
 hypotheses of function, 568–577
 functions, 553–554, 568–577, 709
 pathology of, 560–561
 virus tracing studies, 553–561
- Baseball, experience-based learning in, 155,
 157
- Basic fibroblast growth factor (bFGF), 30
- Basketball, complex learning environments,
 156–157
- Basolateral complex (BLA), in fear learning/
 conditioning, 911, 913, 915–917, 919
- Basolateral nuclei, 911
- Basomedial nuclei, 911
- Bayesian information criterion (BIC), 378,
 379, 380
- Bayesian statistics, 396–406
 basic ideas, 396–397
 color constancy and, 398–401
 cone mosaic and, 401–404
 empirical estimation, 529
 ideal Bayesian observer, 420–421, 530
 inference and, 159
 duality with optimal control, 614–622
 linear estimator, 528
 maximum a posteriori (MAP) estimator,
 528–529, 532
 models in, 397–398, 404–406
 optimal estimation and, 527–529
 perceptual Bayesianism, 530–531
 quadratic error (least squares) solution,
 527–528
 unsupervised regression, 529
- Behavioral measures
 of attention, 189–200
 attentional bottleneck, 282–283
 consciousness as, 199–200
 control of attention, 198–199
 feature binding, 197–198, 274–276
 focused versus distributed attention,
 199
 limits on attention, 189–191
 selection process, 191–193
 timing, 193–197
 of facial recognition, 467–470, 473–474,
 477–478
 in goal-directed choice
 multiple behavioral controllers,
 1078–1079
 simple binary stimulus, 1076–1077,
 1079–1081
 of multisensory integration, 505–506
- Belief networks, 614–621
- Belief propagation, 621
- Bellman equation, 617
- Bereitschaftspotential* (BP), spontaneous motor
 initiation, 1191
- Beta-band synchronization, 298–299
- Biased competition theory, 198–199,
 705–706
- Bibliometric studies, 1221–1222
- Bilingualism, infant, 848–849
- Bimanual movements, goal representation
 in, 645–647
- Binocular correlation, in depth perception,
 489–490
- Binocular disparity, in depth perception,
 483, 484–489
- Binocular rivalry, 1143, 1156, 1170–1176,
 1209
- Biolinguistics, 875–876
- Biological theory of consciousness
 described, 1112–1113
 explanatory gap and, 1114
 self in, 1118–1119
- Birds
 cross-species comparisons of neocortical
 development, 8
 mechanisms underlying vocal learning,
 878–879
- Blind spots, filling-in, 436–437
- Blindness
 attention and, 170–171
 consciousness as requirement for
 exclusion, 1194–1195
 inattentive, 195–196
 metacognitive masking and, 1198, 1199
 nonconscious processing of emotion, 1186
 sensory substitution and, 167–169, 321
 visual area involvement in nonvisual tasks,
 168–169
- Bliss, Tim, 109–111
- Blue cone monochromacy, 390
- BOLD fMRI. *See under* Functional magnetic
 resonance imaging (fMRI)
- Bottom-up influences, in selective attention,
 212–214
 attentional processing, 298–299
 relation to top-down influences, 213–214
 scene segmentation, 212–213
 visual salience, 212
- Boulder Committee model, 10, 11, 12
- Bound functional morphemes (inflections),
 777
- Boundary processing
 in controlling spread, 439–441
 in object recognition process, 455–460,
 463–464
 in surface perception, 436–437, 439–441,
 442–443
- Brachium of the IC (BIC), 95
- Bradykinesia, 571, 573
- Bradyphrenia, 573
- Brain damage. *See also* Lesion studies;
 Stroke
 moral judgment and, 987–988
 parahippocampal region, 659–660
 recovery of consciousness after brain
 injury, 1123–1134
 central thalamic deep-brain stimulation,
 1131–1134
 circuit mechanisms underlying forebrain
 function, 1128–1130
 detecting awareness in absence of
 behavioral responsiveness,
 1125–1127
 disorders of consciousness overview,
 1124–1125
 functional recovery and white matter
 structural changes, 1127–1128
 future directions, 1133–1134
 striatal, 593–594
 virtual, 1005
- Brain-derived neurotrophic factor (BDNF),
 100, 145, 146–147
- Brain specialization, 53–61
 comparative genomics, 58–61
 comparative histology, 54–55
 comparative neuroimaging, 55–58
- Brain surgery, plasticity as opportunity for
 intervention, 148
- Brain volume, 746
- BrdU, as marker for DNA synthesis, 8
- Broadbent, W. H., 1032–1033
- Broadly congruent, 629
- Broca, Paul, 1235
- Broca's area
 aphasia and, 741, 773, 808, 809, 811,
 1236, 1237
 comparative neuroimaging, 57
 connectivity studies, 261
 in early language acquisition, 847–848
 in human brain specialization, 53
 morphological processing and, 782
 neuronal circuitry of frontal lobe, 39
 in semantic unification network, 831
- Brodman's area, 1021, 1236
- Buck, Linda, 324–325
- Burst neurons, 1089–1090
- Bush, George H. W., 1260
- C**
- Cajal-Retzius cells, 33, 37, 42
- Calbindin, in human brain specialization,
 55, 56
- Calcium
 cross-species comparisons of cortical
 development, 14
 in long-term potentiation (LTP) process,
 146
 in postsynaptic terminal, 111, 112
- Calcium/calmodulin-dependent kinase II
 (CaMKII), 116
- Calretinin, in comparative histology, 54
- Cancer, 858
- Capacity for culture, 875
- Caring, moral judgment and, 988–989

- Cascade model, 1021–1023
described, 1021–1022
- Caspases, cross-species comparisons of
cortical development, 16
- Cat-301, 55, 56
- Cats
sensory substitution in, 321
visual cortex
formation of eye-specific inputs, 68
temporal code in perceptual learning, 136
- Caud, caudate nucleus, neuronal circuitry of
frontal lobe, 31
- Causal manipulation, in depth perception, 492–493
