Preface	xiii
1 Introduction	1
1.1 Applications	2
1.2 Motivating Example	6
1.3 The Design Process	8
1.4 Summary	15
I Modeling Dynamic Behaviors	17
2 Continuous Dynamics	19
2.1 Newtonian Mechanics	20
2.2 Actor Models	25
2.3 Properties of Systems	28
2.4 Feedback Control	31
2.5 Summary	37
Exercises	37

3	Discrete Dynamics	41
3.1	Discrete Systems	42
3.2	The Notion of State	46
3.3	Finite-State Machines	47
3.4	Extended State Machines	56
3.5	Nondeterminism	62
3.6	Behaviors and Traces	66
3.7	Summary	69
	Exercises	70
4	Hybrid Systems	75
4.1	Modal Models	76
4.2	Classes of Hybrid Systems	80
4.3	Summary	95
	Exercises	96
5	Composition of State Machines	103
5.1	Concurrent Composition	105
5.2	Hierarchical State Machines	119
5.3	Summary	123
	Exercises	124
6	Concurrent Models of Computation	129
6.1	Structure of Models	130
6.2	Synchronous-Reactive Models	132
6.3	Dataflow Models of Computation	142
6.4	Timed Models of Computation	154
6.5	Summary	163
	Exercises	163

II	Design of Embedded Systems	169
7	Sensors and Actuators	171
7.1	Models of Sensors and Actuators	173
7.2	Common Sensors	186
7.3	Actuators	191
7.4	Summary	196
	Exercises	197
8	Embedded Processors	201
8.1	Types of Processors	202
8.2	Parallelism	212
8.3	Summary	227
	Exercises	227
9	Memory Architectures	229
9.1	Memory Technologies	230
9.2	Memory Hierarchy	232
9.3	Memory Models	240
9.4	Summary	245
	Exercises	245
10	Input and Output	249
10.1	I/O Hardware	250
10.2	Sequential Software in a Concurrent World	261
10.3	Summary	271
	Exercises	272
11	Multitasking	279
11.1	Imperative Programs	282
11.2	Threads	286

11.3 Processes and Message Passing	298
11.4 Summary	303
Exercises	304
12 Scheduling	309
12.1 Basics of Scheduling	310
12.2 Rate Monotonic Scheduling	316
12.3 Earliest Deadline First	320
12.4 Scheduling and Mutual Exclusion	325
12.5 Multiprocessor Scheduling	329
12.6 Summary	335
Exercises	335
III Analysis and Verification	341
13 Invariants and Temporal Logic	343
13.1 Invariants	344
13.2 Linear Temporal Logic	346
13.3 Summary	354
Exercises	356
14 Equivalence and Refinement	359
14.1 Models as Specifications	360
14.2 Type Equivalence and Refinement	361
14.3 Language Equivalence and Containment	364
14.4 Simulation	370
14.5 Bisimulation	377
14.6 Summary	379
Exercises	380

15	Reachability Analysis and Model Checking	385
15.1	Open and Closed Systems	386
15.2	Reachability Analysis	387
15.3	Abstraction in Model Checking	394
15.4	Model Checking Liveness Properties	397
15.5	Summary	403
	Exercises	405
16	Quantitative Analysis	407
16.1	Problems of Interest	408
16.2	Programs as Graphs	410
16.3	Factors Determining Execution Time	415
16.4	Basics of Execution Time Analysis	421
16.5	Other Quantitative Analysis Problems	431
16.6	Summary	432
	Exercises	433
17	Security and Privacy	437
17.1	Cryptographic Primitives	439
17.2	Protocol and Network Security	446
17.3	Software Security	451
17.4	Information Flow	454
17.5	Advanced Topics	462
17.6	Summary	467
	Exercises	467

IV Appendices	469
A Sets and Functions	471
A.1 Sets	471
A.2 Relations and Functions	472
A.3 Sequences	476
Exercises	478
B Complexity and Computability	479
B.1 Effectiveness and Complexity of Algorithms	480
B.2 Problems, Algorithms, and Programs	483
B.3 Turing Machines and Undecidability	485
B.4 Intractability: P and NP	491
B.5 Summary	494
Exercises	494
Bibliography	497
Notation Index	515
Index	517
