
Index

- Abortion. *See also Embryo mortality risks; Infanticide*
case for in early hominid evolution, 126, 127
in cases of rape, 249–250, 258n.11, 306
sperm ejection, 50, 51
spontaneous abortion, 50–51, 214
- Abortion laws, reporting of rapes affected by, 126
- Absent father. *See* Paternal preclusion
- Ache foragers, 226–227. *See also* Hunter-gatherer groups
- Acquaintance rape, 199, 224, 397–398
date rape, 229, 399
- Acquired Immune Deficiency Syndrome (AIDS). *See* AIDS
- Adaptation
vs. amateness, 98–99
complexity of through natural selection, 7–9, 108–109
defined, and standards for evaluating, 237, 240–242
difficulty in distinguishing from other products of evolution, 272, 273
example of bipedalism, 240
exaptation, 110–111 (*see also* Phenotypic plasticity)
and maladaptation, 176
in rape hypothesis, assumed rather than defined, 163, 240, 242
- Adaptationism, 98–99, 244–246
existence of phyletic inertia as a refutation of, 244–246
- Adaptive trait
difficulty in distinguishing from other products of evolution, 272
the eye as a model of, 369–370
heritability of trait(s) crucial to defining, 236, 241
importance of identifying and describing, 240–241
rape-specific hypothesis assumes a specialized motivational module, 156–158, 166n.1, 178, 179, 236, 245, 306
whether rape behavior can be objectively defined as, 369–370, 374
- Adversarial view of sexuality
as an attitude associated with sexual aggressiveness, 398
in sexology, 348–350
- Age preferences in mate selection criteria
cross-cultural variation in, 280–281, 282, 286, 289t., 289
sex differences in inversely related gender equality indicators, 289t., 289–290
- Ages of rape victims. *See also* Infertility in reproductive-aged women; Trauma from rape
many are children, 180, 195
many are of postreproductive age, 180, 215
most are not of reproductive age, 32–33, 37, 43, 240–241

- Ages of rape victims (cont.)
 reflecting opportunity or normal preferences rather than special preferences of rapist, 214–215, 228
 results reported by Thornhill and Palmer based on invalid use of data, 90, 228–229
 as women of reproductive age (predicted in the rape-specific hypothesis), 177, 180, 227–229, 237
- Aggression. *See also* Female aggression; Male aggression
 control theory of, 392
 in females, 391
 psychological theories of, 391
 social disorganization theory of, 392
 theories of, 112–113, 114, 389–393
- Aggression-dominance model of rape. *See also* Aggression; Gang rape; Gender asymmetry; Male-on-male rape; Sexual violence; Violence against women; War rape
 aggression-related behaviors in animals involve sexual behaviors, 32
 in Brownmiller, 3, 211, 383, 385
 efficacy of the model, 164, 200–201, 230, 258n.8
 role of gender inequality in, 11
 opposed or dismissed in Thornhill and Palmer, 161, 192, 193, 247, 251–253, 342, 377–378
 sexual aspect is not excluded in, 162, 167n.5, 201–202, 224, 251–253, 343
 social and gender relations mediate the expression of sexual behaviors, 21, 337, 339, 340 (*see also* Cultural models of rape)
 support for within evolutionary psychology, 249, 258n.9
 view that the by-product hypothesis would support, 175–176
 violent aspects of sexual assault, 180–181, 211–212
- AIDS, 7, 316–317. *See also* Sexually transmitted diseases

- Female dominance strategies. *See also* Female aggression; Female as sexual selector
 estrus resulting in shift to dominance, 40
 networking behavior, 40–41
 reverse sexual dimorphism, 35–36, 39, 40
 species in which females are dominant though males are larger, 39–40
- Female parental investment. *See* Maternal investment
- Female philopatry, 40–41
- Female promiscuity. *See* Promiscuity in females
- Female reproductive autonomy, 75–78, 76f. *See also* Female as sexual selector; Mating preferences
 at the heart of the consent issue, 116–117
 impeded with vulnerability to male dominance, 79f., 80–81
 maternal power associated with offspring viability, 73–74
- Female reproductive strategies. *See also* Female dominance strategies; Female as sexual selector
 association behaviors, 46–47
 avoidance behaviors, 43, 151
 favoring mutualism over aggressive traits in males, 22, 310–311, 358
 female counterstrategies, 64, 65
 garnering resources from males, 40, 78–79, 79f., 147 (*see also* Paternal investment)
 physical defenses against impregnation (*see* Physiological reproductive defenses of females)
 preferential association with certain males, 46–47
 promiscuity (with resulting paternal uncertainty) may be strategic, 44, 49–50, 224, 226
- Female sexuality
 active and selective components of, 17–18, 418, 420
 role of clitoris in human, 225
 hormonal mediation of desire, 42–43
 initiation behavior, 43, 213, 226
 as proactive, 30–31, 418, 420
 promiscuous among female primates, 44, 224, 226–227

- Female as sexual selector. *See also* Female reproductive autonomy; Female sexuality; Physiological reproductive defenses of females in animal behavior, 17–18, 46–47, 418, 420
 assuming posture of anatomical receptivity, 36–37, 38
 behavior during intercourse can affect fecundity, 50
 choices in mate selection enhancing offspring fitness, 66–70, 79f., 79–80
 choices in mate selection favoring affiliation and reliability in males, 22, 310–311, 358
 in Darwin's sexual selection theory, 269
 favoring resource-sharing traits in males, 40, 311–312
 protective value of intrasexual networks, 40–41
 reproductive control vested in the female, 29, 31–32
- Female variation within population, 67, 82
 will impact on male reproductive strategies, 68, 74
- Female vulnerability
 ability to detect as a rape-related skill (Thornhill and Palmer), 212–213, 237, 247
 ability to detect vulnerability as a general skill, 247
- Feminist account of rape. *See also* Aggression-dominance model of rape; Male dominance; Prevention of rape
 cultural norms govern the ways sexual behavior is expressed, 337, 339, 340, 358–359
 misrepresented (by Thornhill and Palmer), 184, 251–253, 342, 377–378
 resulting in a shift in legal treatment and consciousness, 187, 349–350, 377, 395
- Thornhill and Palmer pit themselves against, 20, 101, 132–133
- Feminist anti-rape movement, 132, 186–187, 350–351, 395
- Feminist critique of the rape-evolution hypothesis
 biological determinism elides social improvement, 231
 legitimizes discourse that rape is “natural,” 207, 342–343, 348
 refocuses blame on the victim, 101, 199–200, 257
