

Table of Contents

Preface	ix
I Keynotes	1
Leroy Cronin: <i>Hybrid Chemo-Robotic Systems for Embodied Chemical Evolution</i>	3
II Oral Presentations	7
Evolutionary Dynamics	9
Atsuko Mutoh, Shohei Kato and Nobuhiro Inuzuka: <i>Evolution of Frequency-Dependent Sexual Selection Using Agent-Based Model</i>	9
Aditya Rawal, Risto Miikkulainen and Janette Boughman: <i>Evolution of Communication in Mate Selection</i>	16
Antoine Frenoy, François Taddei and Dusan Misevic: <i>Constrained Genetic Architecture Promotes Cooperation</i>	23
Kyle Harrington, Jesse Freeman and Jordan Pollack: <i>Coevolution in Hide and Seek: Camouflage and Vision</i>	25
Carole Knibbe and David P. Parsons: <i>What Happened to My Genes? Insights on Gene Family Dynamics from Digital Genetics Experiments</i>	33
Jeff Clune, Jean-Baptiste Mouret and Hod Lipson: <i>Summary of “The Evolutionary Origins of Modularity”</i>	41
Daniel Weissman: <i>Stress-Induced Variation Can Cause Average Mutation and Recombination Rates to Be Positively Correlated with Fitness</i>	43
Drew Blount: <i>Identifying Adaptations by Measuring the Trait Derivative of Fitness</i>	45
Yifei Wang, Joanna Bryson and Stephen Matthews: <i>Evolving Evolvability in the Context of Environmental Change: A Gene Regulatory Network (GRN) Approach</i>	47
Danesh Tarapore and Jean-Baptiste Mouret: <i>Comparing the Evolvability of Generative Encoding Schemes</i>	55
Padmini Rajagopalan, Kay E. Holekamp and Risto Miikkulainen: <i>The Evolution of General Intelligence</i>	63
Christopher Timperley and Susan Stepney: <i>Reflective Grammatical Evolution</i>	71
Andrew M. Webb and Joshua Knowles: <i>Studying the Evolvability of Self-Encoding Genotype-Phenotype Maps</i>	79
Daniel Power, Eors Szathmáry and Richard Watson: <i>Ecosystem Memory Is Emergent from Local-Level Natural Selection</i>	87
Dominique Chu and David Barnes: <i>Evolving Biological Systems: Evolutionary Pressure to Inefficiency</i>	89
Artificial Evolutionary Ecosystems	97
Joachim Erdei and Borys Wrobel: <i>Evolution of Animats Following a Moving Target in an Artificial Ecosystem</i>	97
Takashi Ito, Marcin L. Pilat, Reiji Suzuki and Takaya Arita: <i>Population and Evolutionary Dynamics Based on Predator-Prey Relationship in 3D Physical Simulation</i>	105
Laura Grabowski and Javier Magana: <i>Building on Simplicity: Multi-stage Evolution of Digital Organisms</i>	113
Anya Johnson, Eli Strauss, Rodney Pickett, Christoph Adami, Ian Dworkin and Heather Goldsby: <i>More Bang For Your Buck: Quorum-Sensing Capabilities Improve the Efficacy of Suicidal Altruism</i>	121
Arthur W. Covert III, Siena McFetridge and Evan Delord: <i>Structured Populations with Limited Resources Exhibit Higher Rates of Complex Function Evolution</i>	129

Robot and Agent Behavior	135
Joshua Auerbach, Deniz Aydin, Andrea Maesani, Przemyslaw Kornatowski, Titus Cieslewski, Gregoire Heitz, Pradeep Fernando, Ilya Loshchilov, Ludovic Daler and Dario Floreano: <i>RoboGen: Robot Generation through Artificial Evolution</i>	135
Mark Wagy and Josh Bongard: <i>Collective Design of Robot Locomotion</i>	138
Antoine Cully and Jean-Baptiste Mouret: <i>Learning to Walk in Every Direction with the TBR-Learning algorithm</i>	146
Jared Moore and Philip McKinley: <i>Investigating Modular Coupling of Morphology and Control with Digital Muscles</i>	148
Sylvain Koos, Antoine Cully and Jean-Baptiste Mouret: <i>Abstract of: “Fast Damage Recovery in Robotics with the T-Resilience Algorithm”</i>	156
Evert Haasdijk, Nicolas Bredeche and A. E. Eiben: <i>Making MONEE</i>	158
Sébastien Mazac, Frédéric Armetta and Salima Hassas: <i>On Bootstrapping Sensori-Motor Patterns for a Constructivist Learning System in Continuous Environments</i>	160
Matthew Egbert and Lola Cañamero: <i>Habit-Based Regulation of Essential Variables</i>	168
Chris Johnson, Andrew Philippides and Philip Husbands: <i>Active Shape Discrimination with Physical Reservoir Computers</i>	176
John Lones, Matthew Lewis and Lola Cañamero: <i>Hormonal Modulation of Development and Behaviour Permits a Robot to Adapt to Novel Interactions</i>	184
Nicola Capodieci, Emma Hart and Giacomo Cabri: <i>Idiotypic Networks for Evolutionary Controllers in Virtual Creatures</i>	192
Jared Moore and Anthony Clark: <i>Hold the Spot: Evolution of Generalized Station Keeping for an Aquatic Robot</i>	200
Justin K. Pugh, Andrea Soltoggio and Kenneth O. Stanley: <i>Real-time Hebbian Learning from Autoencoder Features for Control Tasks</i>	202
Miguel Duarte, Fernando Silva, Tiago Rodrigues, Sancho Oliveira and Anders Christensen: <i>JBotEvolver: A Versatile Simulation Platform for Evolutionary Robotics</i>	210
Jorge Gomes, Pedro Mariano and Anders Christensen: <i>Systematic Derivation of Behaviour Characterisations in Evolutionary Robotics</i>	212
Soft Robotics and Morphologies	221
Nicholas Cheney, Jeff Clune and Hod Lipson: <i>Evolved Electrophysiological Soft Robots</i>	221
Vito Cacucciolo, Matteo Cianchetti and Cecilia Laschi: <i>A Model-Based Framework to Investigate Morphological Computation in Muscular Hydrostats and to Design Soft Robotic Arms</i>	230
Mark Khazanov, Julian Jocque and John Rieffel: <i>Evolution of Locomotion on a Physical Tensegrity Robot</i>	232
Michal Joachimczak, Reiji Suzuki and Takaya Arita: <i>Fine Grained Artificial Development for Body-Controller Co-evolution of Soft-Bodied Animats</i>	239
Dan Lessin, Don Fussell and Risto Miikkulainen: <i>Adapting Morphology to Multiple Tasks in Evolved Virtual Creatures</i>	247
Daniel Richards and Martyn Amos: <i>Evolving Morphologies with CPPN-NEAT and a Dynamic Substrate</i>	255
Collective Robotics	263
Lenka Pitonakova, Richard Crowder and Seth Bullock: <i>Understanding the Role of Recruitment in Collective Robot Foraging</i>	263
Nicolas Bredeche: <i>Embodied Evolutionary Robotics with Large Number of Robots</i>	272
Plamen Ivanov and Dylan Shell: <i>Associating Nearby Robots to Their Voices</i>	274
Iñaki Fernández Pérez, Amine Boumaza and François Charpillet: <i>Comparison of Selection Methods in On-Line Distributed Evolutionary Robotics</i>	282
Becky Naylor, Mark Read, Jon Timmis and Andy Tyrrell: <i>The Relay Chain: A Scalable Dynamic Communication Link between an Exploratory Underwater Shoal and a Surface Vehicle</i>	290
Collective Behaviors	299
Eliseo Ferrante, Ali Emre Turgut, Tom Wenseleers and Cristián Huepe: <i>Scale-Free Correlations in Collective Motion with Position-Based Interactions</i>	299
Olaf Witkowski and Takashi Ikegami: <i>Asynchronous Evolution: Emergence of Signal-Based Swarming</i>	302
Patrick Haley, Randal Olson, Fred Dyer and Christoph Adami: <i>Exploring Conditions That Select for the Evolution of Cooperative Group Foraging</i>	310
Sebastian von Mammen and Sarah Edenhofer: <i>Swarm Grammars GD: Interactive Exploration of Swarm Dynamics and Structural Development</i>	312

Hiroki Sayama: <i>Four Classes of Morphogenetic Collective Systems</i>	320
Katie Bentley, Kyle Harrington and Erzsébet Ravasz Regan: <i>Can Active Perception Generate Bistability? Heterogeneous Collective Dynamics and Vascular Patterning</i>	328
Brian Hrotenok, Hanuma Teja Maddali, Michael Novitzky, Tucker Balch and Kim Wallen: <i>Inferring Social Structure of Animal Groups From Tracking Data</i>	336
Heiko Hamann: <i>Evolution of Collective Behaviors by Minimizing Surprise</i>	344
Andres Burgos and Daniel Polani: <i>An Informational Study of the Evolution of Codes in Different Population Structures</i>	352
Hugues Bersini: <i>In Between Schelling and Maynard-Smith</i>	360
Social Dynamics and Evolution	365
Arend Hintze and Masoud Mirmomeni: <i>Evolution of Autonomous Hierarchy Formation and Maintenance</i>	365
Alberto Antonioni, Seth Bullock and Marco Tomassini: <i>REDS: An Energy-Constrained Spatial Social Network Model</i>	368
Bijan Ranjbar-Sahraei, Daan Bloembergen, Haitham Bou Ammar, Karl Tuyls and Gerhard Weiss: <i>Effects of Evolution on the Emergence of Scale Free Networks</i>	376
Eric Silverman, Jakub Bijak, Daniel Courgeau and Robert Franck: <i>Advancing Social Simulation: Lessons from Demography</i>	384
Olaf Witkowski and Nathanael Aubert: <i>Pseudo-Static Cooperators: Moving Isn't Always about Going Somewhere</i>	392
Genki Ichinose and Hiroki Sayama: <i>Invasion of Cooperation in Scale-Free Networks: Accumulated vs. Average Payoffs</i>	398
Jiin Jung and Aaron Bramson: <i>An Agent-Based Model of Indirect Minority Influence on Social Change</i>	400
Miguel Gonzalez, Richard Watson, Jason Noble and Seth Bullock: <i>The Origin of Culture: Selective conditions for Horizontal Information Transfer</i>	408
Tsubasa Azumagakitō, Reiji Suzuki and Takaya Arita: <i>Gene-Culture Coevolution of Language: Measurement-Interval Dependence of Evolutionary Rate</i>	415
Matthew Gladden: <i>The Artificial Life-Form As Entrepreneur: Synthetic Organism-Enterprises and the Reconceptualization of Business</i>	417
Boolean Networks, Neural Networks and Machine Learning	419
Taichi Haruna and Sayaka Tanaka: <i>On the Relationship between Local Rewiring Rules and Stationary Out-Degree Distributions in Adaptive Random Boolean Network Models</i>	419
Octavio Zapata and Carlos Gershenson: <i>Random Fuzzy Networks</i>	427
Alexander Gates and Luis Rocha: <i>Structure and Dynamics Affect the Controllability of Complex Systems: A Preliminary Study</i>	429
David Howard and Alberto Elfes: <i>Evolving Spiking Networks for Turbulence-Tolerant Quadrotor Control</i>	431
Xun Li and Risto Miikkulainen: <i>Evolving Multimodal Behavior Through Subtask and Switch Neural Networks</i>	439
Alessandro Fontana, Andrea Soltoggio and Borys Wrobel: <i>POET: An Evo-Devo Method to Optimize the Weights of Large Artificial Neural Networks</i>	447
Jean-Baptiste Mouret and Paul Tonelli: <i>Abstract of: "On the Relationships between Generative Encodings, Regularity, and Learning Abilities when Evolving Plastic Artificial Neural Networks"</i>	455
Konstantin Lakhman and Mikhail Burtsev: <i>Evolution, Development and Learning with Predictor Neural Networks</i>	457
Joshua Auerbach, Chrisantha Fernando and Dario Floreano: <i>Online Extreme Evolutionary Learning Machines</i>	465
Christopher Headleand, Llyr Ap Cenydd and William Teahan: <i>Berry Eaters: Learning Colour Concepts with Template Based Evolution</i>	473
Artificial Chemistries, Cellular Automata and Self-Organizing Systems	481
Peter Banda and Christof Teuscher: <i>An Analog Chemical Circuit with Parallel-Accessible Delay Line for Learning Temporal Tasks</i>	481
Louis Kauffman and Marius Buliga: <i>Chemlambda, Universality and Self-Multiplication</i>	490
Nathaniel Virgo, Simon McGregor and Takashi Ikegami: <i>Self-Organising Autocatalysis</i>	498
Adam Nellis and Susan Stepney: <i>Computational Novelty: Phenomena, Mechanisms, Worlds</i>	506
Eran Agmon, Alexander Gates, Valentin Churavy and Randall Beer: <i>Quantifying Robustness in a Spatial Model of Metabolism-Boundary Co-Construction</i>	514
Theodore P. Pavlic, Alyssa M. Adams, Paul C. W. Davies and Sara Imari Walker: <i>Self-Referencing Cellular Automata: A Model of the Evolution of Information Control in Biological Systems</i>	522

Nathaniel Virgo and Takashi Ikegami: <i>There Can Be Only One: Reversible Cellular Automata and the Conservation of Genki</i>	530
Olivier Wang, Rene Doursat and Paul Bourguine: <i>A Hybrid Off/On-Lattice Model of Emergence and Maintenance Autopoiesis</i>	532
Masayoshi Mitsui, Atsushi Masumori, Ryo Asakura and Hiroya Tanaka: <i>Applying Self-Assembly and Self-Reconfigurable Systems for Printer</i>	539
Jean Disset, Sylvain Cussat-Blanc and Yves Duthen: <i>Self-Organization of Symbiotic Multicellular Structures</i>	541
In-Vitro and In-Vivo Systems	549
Jennifer Pentz, Michael Travisano and William Ratcliff: <i>Clonal Development Is Evolutionarily Superior to Aggregation in Wild-Collected <i>Saccharomyces cerevisiae</i></i>	549
Filippo Caschera and Vincent Noireaux: <i>A Novel in Vitro Metabolic Scheme for the Construction of a Minimal Biological Cell</i>	555
Jakob Lykke Andersen, Christoph Flamm, Martin Hanczyc and Daniel Merkle: <i>Towards an Optimal DNA-Templated Molecular Assembler</i>	557
Stefan Badelt, Christoph Flamm and Ivo L. Hofacker: <i>Computational Design of a Circular RNA with Prion-Like Behavior</i>	565
Hyunju Kim, Paul C. W. Davies and Sara Imari Walker: <i>Informational Architecture of the Fission Yeast Cell Cycle Regulatory Network</i>	569
Evolutionary Art, Philosophy and Entertainment	571
Tomohiro Suzuki and Yasuhiro Suzuki: <i>Modeling and Evaluating the Process of Creating Paintings with Evolution Computing</i>	571
Rubén Héctor García, Pablo García Sánchez, Antonio Mora and J.J. Merelo: <i>My Life As a Sim: Evolving Unique and Engaging Life Stories Using Virtual Worlds</i>	580
Nuno Barreto, Luís Macedo and Licinio Roque: <i>MultiAgent System Architecture in Orphibs II</i>	588
Mostafa Fahmy: <i>Artificial Life and the Philosophy of Science</i>	596
Orly Stettiner: <i>Complex ALife Simulations: From Generating Life-like Behaviors to Predicting Real-life Phenomena</i>	602
Methodologies	605
David Ackley and Trent Small: <i>Indefinitely Scalable Computing = Artificial Life Engineering</i>	605
James Butler, Kieran Alden, Henrique Veiga Fernandes, Jon Timmis and Mark Coles: <i>Novel Approaches to the Visualization and Quantification of Biological Simulations by Emulating Experimental Techniques</i>	614
Kieran Alden, Jon Timmis and Mark Coles: <i>Easing Parameter Sensitivity Analysis of Netlogo Simulations using SPARTAN</i>	622
Xinpei Ma and Hiroki Sayama: <i>Hierarchical Heterogeneous Particle Swarm Optimization</i>	629
Mohammad Eita, Amin Shoukry and Hitoshi Iba: <i>Constrained Group Counseling Optimization</i>	631
III Poster Presentations	639
Ritwik Biswas, David Bryson, Charles Ofria and Aaron Wagner: <i>Causes vs Benefits in the Evolution of Prey Grouping</i>	641
Kai Olav Ellefsen: <i>The Evolution of Learning Under Environmental Variability</i>	649
Miguel Duarte, Sancho Oliveira and Anders Christensen: <i>Evolution of Hierarchical Controllers for Multirobot Systems</i>	657
Yuri Shalygo: <i>The Kinetic Basis of Self-Organized Pattern Formation</i>	665
Onofrio Gigliotta and Marco Mirolli: <i>Evolution of Communication-Based Collaborative Behavior in Homogeneous Robots</i>	673
Paul Grouchy and Gabriele M.T. D’Eleuterio: <i>Evolving Autonomous Agent Controllers as Analytical Mathematical Models</i>	681
Marco Montalva Medel, Gonzalo Ruz and Eric Goles: <i>Attraction Basins in a Lac Operon Model Under Different Update Schedules</i>	689
Eugenia Schneider and Michael Mangold: <i>Discussion of Synchronization Problems During Cell Cycle in Artificial Cell Modeling</i>	691
Morteza Mashayekhi, Abbas Golestani, Yasaman Majdabadi Farahani and Robin Gras: <i>An Enhanced Artificial Ecosystem: Investigating Emergence of Ecological Niches</i>	693

Brett Calcott: <i>Chaining Distinct Tasks Drives the Evolution of Modularity</i>	701
Fernando Silva, Miguel Duarte, Sancho Oliveira, Luis Correia and Anders Christensen: <i>The Case for Engineering the Evolution of Robot Controllers</i>	703
Lance Williams: <i>Self-Replicating Distributed Virtual Machines</i>	711
Ryan Scott and Robin Gras: <i>Testing the Effects of Speciation and Mutation Rates on Distance-Based Phylogenetic Tree Construction Accuracy Using EcoSim</i>	719
James Stovold, Simon O’Keefe and Jon Timmis: <i>Preserving Swarm Identity Over Time</i>	726
Danesh Tarapore, Pedro Lima, Jorge Carneiro and Anders Christensen: <i>Optimizing the Crossregulation Model for Scalable Abnormality Detection</i>	734
Chris Marriott and Jobran Chebib: <i>The Effect of Social Learning on Individual Learning and Evolution</i>	736
Yoshihiko Kayama and Yasumasa Imamura: <i>Self-Organizing Process and Cluster Network in the Game of Life</i>	744
Wonki Lee and Daeun Kim: <i>Adaptive Division of Labor in Multi-Robot System with Minimum Task Switching</i>	750
Atsushi Shibai, Saburo Tsuru, Bei-Wen Ying, Daisuke Motooka, Kazuyoshi Gotoh, Shota Nakamura and Tetsuya Yomo: <i>Mutation Accumulation in Bacteria Exposed to UV Radiation</i>	757
Wonki Lee and Daeun Kim: <i>Task Partitioning Based on Response Threshold Model in Robot Harvesting Task</i>	759
Sjriek Alers, Karl Tuyls, Bijan Ranjbar-Sahraei, Daniel Claes and Gerhard Weiss: <i>Insect-Inspired Robot Coordination: Foraging and Coverage</i>	761
Norihiro Maruyama, Atsushi Masumori, Julien Hubert, Takeshi Mita, Douglas Bakkum, Hirokazu Takahashi and Takashi Ikegami: <i>Designing a Robotic Platform Controlled by Cultured Neural Cells</i>	769
Sergey Muratov, Konstantin Lakhman and Mikhail Burtsev: <i>Neuroevolution of Sequential Behavior in Multi-Goal Navigation Task</i>	771
Yuki Takeichi, Kazutoshi Sasahara, Reiji Suzuki and Takaya Arita: <i>Twitter as Social Sensor: Dynamics and Structure in Major Sporting Events</i>	778
Miguel Duarte, Sancho Oliveira and Anders Christensen: <i>Hybrid Control for Large Swarms of Aquatic Drones</i>	785
L. B. Soros and Kenneth O. Stanley: <i>Identifying Necessary Conditions for Open-Ended Evolution through the Artificial Life World of Chromaria</i>	793
Tarek Ababsa, Noureddine Djedi, Yves Duthen and Sylvain Cussat-Blanc: <i>Splittable Metamorphic Carrier Robots</i>	801
Shota Onoda, Shohei Kato and Atsuko Mutoh: <i>The Effect of the Network Structure Differences on the Diffusion of Items</i>	809
Barak Shenhav: <i>An Artificial Chemistry for the ‘Lipid World’ Scenario</i>	815
Micah Brodsky: <i>Spatial Patterning with the Rule of Normal Neighbors</i>	817
Nawwaf Kharma and William Buckley: <i>CodeRouge: A Project to Evolve Life-Like Autonomous Programs</i>	819
Jessica Lowell and Jordan Pollack: <i>The Effect of Connection Cost on Modularity in Evolved Neural Networks</i>	821
Jessica Lowell, Kyle Harrington and Jordan Pollack: <i>The Resilience of a Swarm Ecosystem Under Environmental Variation</i>	827
Joshua Hecker and Melanie Moses: <i>Real-Time Evolution of iAnt Robot Foraging Strategies</i>	835
Christoph Salge and Daniel Polani: <i>Don’t Believe Everything You Hear: Preserving Relevant Information by Discarding Social Information</i>	837
Morgan McLaughlin and Mark Wineberg: <i>The Effect of Network Structure on the Spatial Coevolutionary GA</i>	845
Andrew Nelson and Brenae Bailey: <i>Evolution as a Random Walk on a High-Dimensional Manifold Defined by Physical Law: Implications for Open-Ended Artificial Life</i>	847
Haifa Rabai, Rodolphe Charrier and Cyrille Bertelle: <i>Close Returns Plots for Detecting a Chaotic Source in an Interaction Network</i>	849
William Hurndall, Richard Watson and Markus Brede: <i>Pre-Template Metabolic Replicators: Genotype-Phenotype Decoupling as a Route to Evolvability</i>	856
Antoine Hiolle, Matthew Lewis and Lola Cañamero: <i>A Robot That Uses Arousal to Detect Learning Challenges and Seek Help</i>	864
Alan Winfield: <i>Estimating the Energy Cost of (Artificial) Evolution</i>	872
Matthew Francisco, Ian Wood, Selma Sabanovic and Luis Rocha: <i>Designing a Minimalist Socially Aware Robotic Agent for the Home</i>	876
Adam Wang, Jacob Gold and Kyle Harrington: <i>Feedback Control of Evolving Swarms</i>	884
Ioan Muntean: <i>Computation and Scientific Discovery? A Bio-Inspired Approach</i>	892
Paul Szerlip and Kenneth O. Stanley: <i>Steps Toward a Modular Library for Turning Any Evolutionary Domain into an Online Interactive Platform</i>	900

Brent Eskridge and Ingo Schlupp: <i>Effects of Personality Distribution on Collective Behavior</i>	908
Jason Yoder and Larry Yaeger: <i>Evaluating Topological Models of Neuromodulation in Polyworld</i>	916
Morgan Mclaughlin and Mark Wineberg: <i>The Effects of Elitism on Spatial Coevolutionary GAs</i>	924
Matthew Lewis, Antoine Hiolle and Lola Cañamero: <i>Pleasure, Persistence and Opportunism in Action Selection</i>	932
Marco A. Montes de Oca and Louis Rossi: <i>A Continuous-Time Binary Consensus Protocol with Hysteretic Units Applied to the Density Classification Problem</i>	934
Insook Choi and Robin Bargar: <i>Sounds Shadowing Agents Generating Audible Features from Emergent Behaviors</i>	941
Martin Biehl, Christoph Salge and Daniel Polani: <i>Towards Designing Artificial Universes for Artificial Agents Under Interaction Closure</i>	949
Sergi Canyameres Masip and Doina Logofatu: <i>Framework for Adaptive Swarm Simulation and Optimization Using MapReduce</i>	957
Yutetsu Kuruma, Hideaki Matsubayashi and Takuya Ueda: <i>In Vitro Reconstruction of Functional Membrane</i>	963
Ahmed Abdelmoteleb, Neil Davey, Maria Schilstra, Volker Steuber and Borys Wrobel: <i>Evolving Spiking Neural Networks for Temporal Pattern Recognition in the Presence of Noise</i>	965
Anton Bernatskiy, Gregory S. Hornby and Josh Bongard: <i>Improving Robot Behavior Optimization by Combining User Preferences</i>	973
Mads Buch and Steen Rasmussen: <i>Blueprint for Self-Replicating and Self-Assembling 3D Printers</i>	981
Megumi Sakai and Yasuhiro Suzuki: <i>Evolution of Chemical Signals in Ecological System Evoked by the “Cry-Wolf” Plants</i>	983
Atsushi Masumori, Masayoshi Mitsui and Hiroya Tanaka: <i>Designing a Passive Folding String Device with an Electromagnet</i>	987
